MY WEIGHT LOSS**

Learn the science behind weight loss
and help break the cycle of weight regain.
Form a personalized weight-management
plan with your health care professional.

Why do we regain weight after losing it?

Approximately 2 out of 5 adults are living with the disease of obesity, which is classified as a BMI (body mass index) of 30 or more. If you've repeatedly tried to lose weight and achieved results that don't seem to last, you're not alone.

People with excess weight generally make 7 serious attempts to lose weight. Many lose weight at first, but the weight can return. Science now shows what we have long suspected: **after losing weight the body tries to put it back on.**

Following weight loss, the body's metabolism slows down and appetite hormones can change, making you feel more hungry and less full. This can make maintaining your weight as challenging as actually losing the weight.

Break the cycle of weight regain

You and your health care professional can create a weight-management plan, which may include lifestyle changes, prescription medicine, or bariatric surgery.

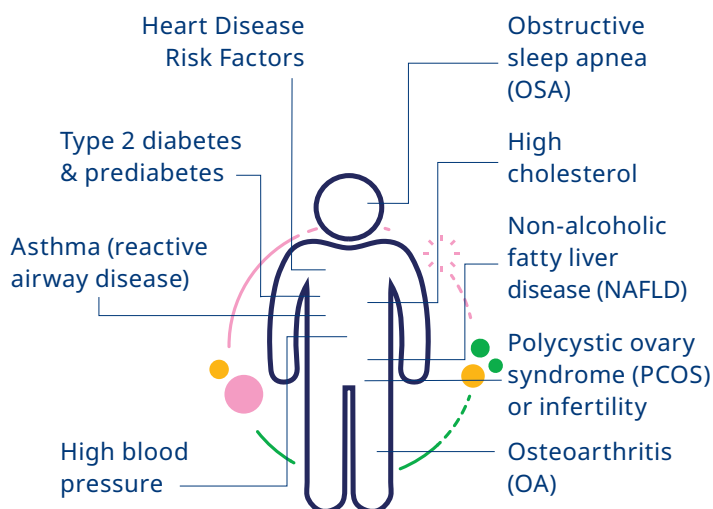

Losing weight is challenging, but maintaining results is just as hard. Creating a personalized weight-management plan with your health care professional can help.

Losing 5%-15% of your total weight may improve some weight-related conditions

What does losing 5% of your weight look like?

For example, someone who currently weighs 250 lb might notice a benefit in some weight-related health issues if they lose 13 lb or more.

Small changes can be a big win

Some victories go beyond simply losing weight. By sticking to a plan and setting new goals for the road ahead, weight loss could offer improvements in:

Energy levels

Moderate to vigorous activity

Walking, climbing stairs, or kneeling

Chores, such as carrying groceries

Mood

Achieving your goals can be challenging at times. We're here to help! Visit [TruthAboutWeight.com](https://www.TruthAboutWeight.com) for tips to stay on track.

Make a plan to meet your goals

A weight-management plan tailored to your lifestyle is critical for **preventing the weight you lose from coming back.**

Maintaining weight loss is just as important as losing it in the first place.

While healthy eating and physical activity are essential, they may not be enough to keep weight off. In fact, only 1 in 10 people are able to lose weight and keep that weight off for more than a year.

“*It was a huge relief for me to learn that obesity wasn’t something that I had to handle on my own, and that if it became a problem for me again there were other options available for me that could help me to manage it.*”

— Donna, Novo Nordisk Patient Ambassador

Working with a health care team may be what’s missing. Talk to a health care professional about the different types of treatment options, including:

- Behavioral changes
- FDA-approved* prescription medicine
- Bariatric surgery

Start a conversation about weight with your health care professional

Speaking frankly about past attempts at weight loss can be hard, but your health care professional will be better able to provide a personalized plan if they hear from you directly.

These topics may make it easier to start the conversation:

YOUR HISTORY

"I've tried several weight-loss plans on my own and haven't been successful long term."

YOUR CONCERNS

"I'm worried about my health, especially heart disease. Can you help?"

YOUR OPTIONS

"I want to talk about weight-loss options I haven't tried yet."

Focus your conversation on weight management

At your next appointment, share your story including your weight changes, any weight-management strategies that have or have not helped, and your current goals. Capturing your **TrueWeight®** at **TruthAboutWeight.com** will help you guide the conversation with your health care professional.

Your personalized TrueWeight® Report helps you record:

- **Weight history:** Life events and circumstances that triggered weight loss or weight regain
- **Current weight-loss efforts:** What you've been doing to try to lose weight and for how long
- **Tips on talking with a health care professional** about creating personal goals and exploring treatment options

MEET DONNA

Novo Nordisk Patient Ambassador

Donna spent three decades looking for an effective weight-management plan. By working with her health care professional, she finally achieved lasting success.

“

This is a personal decision. And you're going to have to make it on your own. But you need to know that this is something you can control. You have the responsibility to treat it, but that doesn't mean it's your fault.

”

MEET LISA

Novo Nordisk Patient Ambassador

Lisa worked to address her weight for years. She tried every fad, yo-yo, and crash diet. There wasn't an easy solution. But when she met the right health care professional, that changed everything.

“

If you are struggling with your weight and you want help, don't give up. Keep going. The plan that my doctor had for me was weight-management medicine, exercise, and eating healthy.
